• Non-cluttered page for ease of use and as a calming effect on the reader
• Accessibility in mind.

Function:
• Option to play soothing music - embedded?
• Option to embed YouTube videos?
• Click to call samaritans or anxiety helplines.
• Html forms to post user input
• Click to email website admin in footer
• CSS with animations
• Voice assistance for accessibility

Project 1 Documentation - User Instructions

Introduction:

Welcome to "Resonate".

This website has been created to help guest identify if they have experienced anxiety. Content on the website is created to help educate the guests on Anxiety and what contributes towards anxiety in people. It presents useful information to guests who experience anxiety and provides tools to the guest with the purpose of helping them manage their anxiety, for example mindfulness apps, videos and calming music.
This website also serves to signpost guests with anxiety to other services should they need greater support.
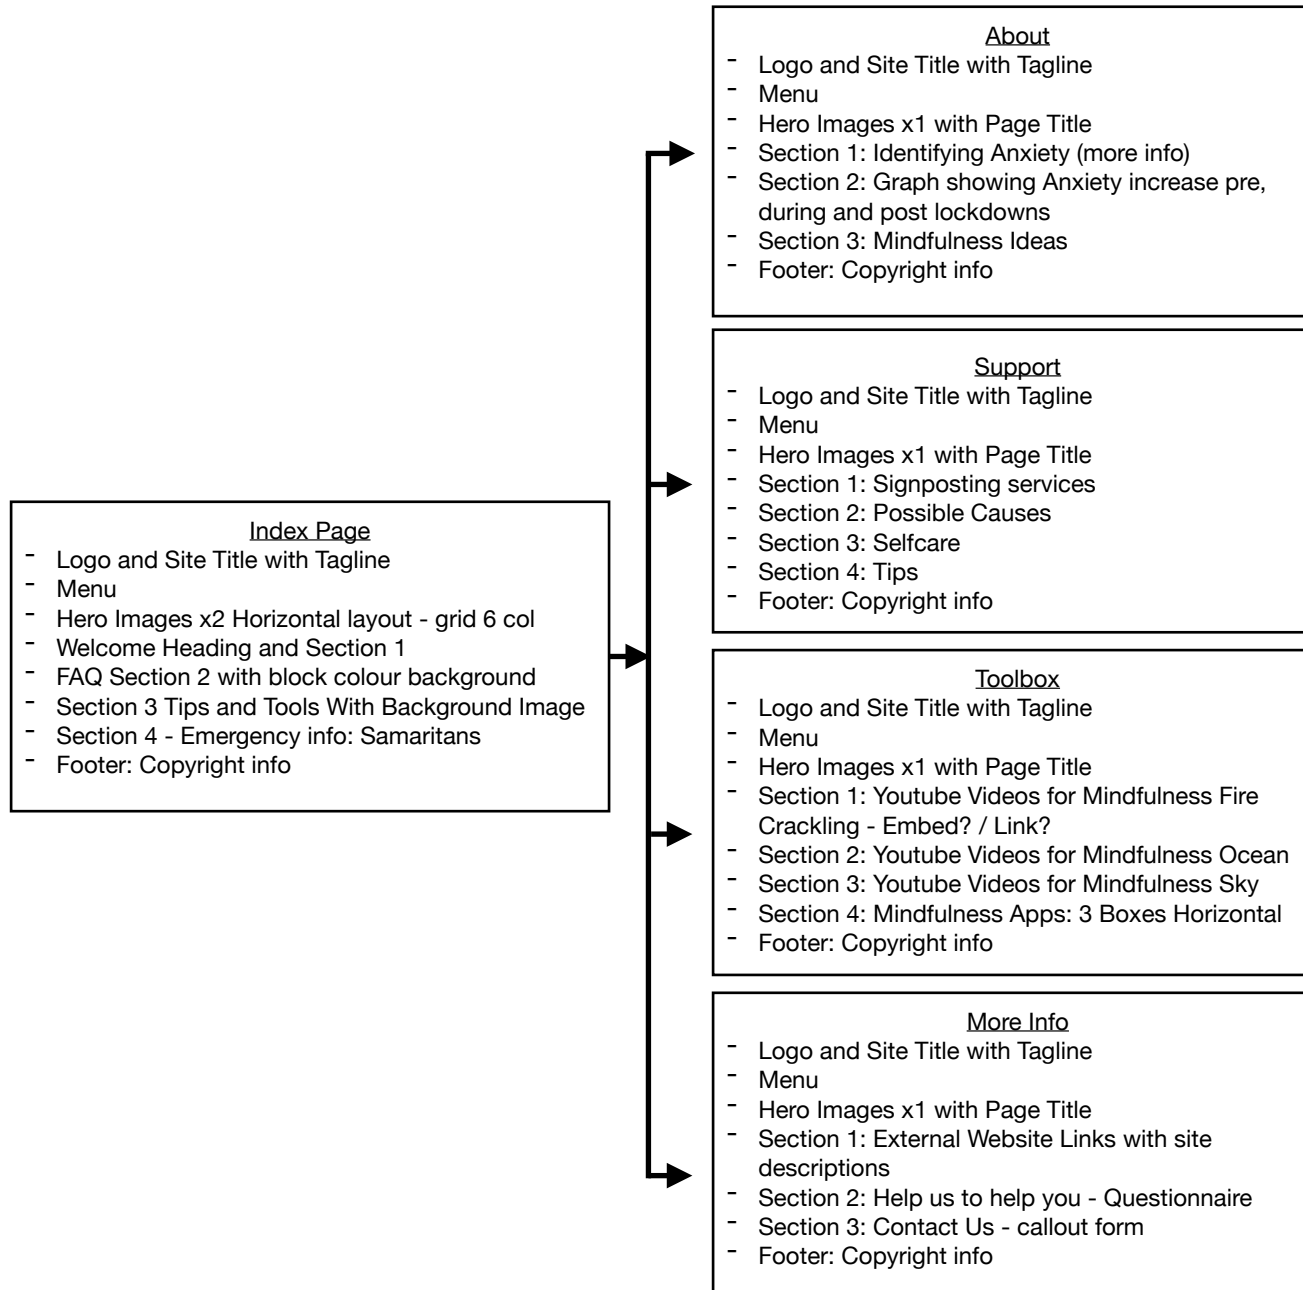

Instructions:

• The Top of the website contains the Header for the Website. This contains the Logo, Site Title, Tagline, and Website Menu. This is found on each page of the website, and has a standard layout for ease of use. This is not a dropdown menu. Each Menu Item links to one page.

• Each page is divided up into sections, which provide useful information. Some of these sections contain interactive content, such as a link to call a phone number for the Samaritans, or other support service. There is also a questionnaire on the More page. This is to provide feedback to our website admins, so they can add to the site in the future with further content that the guests request.

• Some pages will have content embedded, such as a video, or audio.

• At the bottom of the page is the Footer, this contains copyright information, as well as a link to send an email to the website admin if there is any difficulty with the website.

Accessibility:

• The site is designed with accessibility in mind, so that the site can be read out using voice assistance.

• Colours are selected to be soothing, but legible.

• The site can be resized according to the guests requirements.

Project 1 Documentation - WEBSITE PLAN

About
- Logo and Site Title with Tagline
- Menu
- Hero Images x1 with Page Title
- Section 1: Identifying Anxiety (more info)
- Section 2: Graph showing Anxiety increase pre, during and post lockdowns
